WATER *Water is the most important element in the world. It is the source of life and the most precious resource on the planet. Without water, there would be no life as we know it. Water is essential for all living organisms, from the smallest microorganisms to the largest animals. It is also a vital component of the Earth's climate system, regulating temperature and weather patterns. Water is a renewable resource, but it is not infinite. We must use it wisely and sustainably to ensure that it is available for future generations.*
